

NOPy po szczepieniach DTP i kombinowanych

Lista NOPów po szczepieniach DTP, DTaP, DTP+IPV, DTaP+HepB (WzwB), DTaP+*Haemophilus influenzae* b zgłoszonych do bazy VAERS. (Liczby przypadków trzeba pomnożyć przez co najmniej 20).

Widzimy tu 1116 zgłoszonych przypadków zgonów łóżeczkowych (SIDS), czyli było ich prawdopodobnie ponad 22 000; 952 przypadki autyzmu + ASD (schorzeń ze spektrum autyzmu + dziecięcego zaburzenia dezintegracyjnego, co znaczy było ich ponad 19 000 po tych szczepieniach; są tu zgony, zawały serca, udary mózgu, krwotoki, drgawki, padaczka, paraliż i tysiące innych poważnych, zagrażających życiu powikłań, a także krztusiec, przed którym rzekomo te szczepionki mają chronić. Analiza NOPów uświadamia nam jakim wielkim absurdem medycznymi oraz zagrożeniem dla zdrowia i życia dzieci są szczepienia. Naturalny krztusiec bardzo łatwo wyleczyć w ciągu kilku dni antybiotykiem, dyfertyt od wielu lat jest niespotykany w Europie czy USA (i też jest łatwo wyleczalny), tężec prawie nigdy nie zdarza się wśród niemowląt, infekcje bakterią Haemophilus są łatwo wyleczalne. Jedyne przypadki poliomyelitis (paraliżu) jakie zdarzają się jeszcze w krajach rozwiniętych to poszczepienne przypadki paraliżu wiotkiego, wynikające z zakażenia żywym wirusem zawartym w szczepionkach OPV (nadal stosowanych w Polsce). W naszych czasach w krajach rozwiniętych żadna naturalna choroba zakaźna (choć one nadal się zdarzają) nie wyrządza dzieciom tak wielkich i trwałych szkód jakie wyrządzały szczepienia. Badania pokazują, że także w biednych krajach Afryki umieralność niemowląt znacznie wzrasta po szczepieniach DTP i kombinowanych. Medycyna szczepionkowa to dziś głównie medycyna jatrogenna praktykowana wyłącznie dla zysków karteli farmaceutycznych.
